

FAOUR GLASS
TECHNOLOGIES

Designing with Glass

Glass is one of the most unique and versatile building products, offering architects and designers the combination of beauty, strength and functionality. Whether it's large unobtrusive exterior glazing systems bringing the outside in, or interior structural glass creating a dramatic statement and openness to a space, our work at Faour Glass will inspire and amaze you; we provide the most creative glass solutions in the industry.

Projects

Faour Glass works with and inspires architects and designers on every project. Our engineering and design team creates the glass structures and glazing systems specific to the project design desires and performance requirements. Our installation teams carry out each of our creations, paying attention to the smallest details and providing the highest level of quality. Our incredible portfolio of projects illustrates the creative innovations with glass, how we work with our design partners and the unparalleled quality of our installations.

Products

SLIMPACT® FRAMELESS IMPACT WINDOWS & DOORS

Slimpact® windows & doors offer the combination of beauty, elegance, and performance in a frameless impact glazing system. The first of its kind, Slimpact® products feature a structural glazing technique designed for the luxury residential and commercial markets. With no framing on the Slimpact® Window and minimal metal on the Slimpact® Door, there are no obstructed views while still meeting Florida's large missile impact requirements.

STAIRS

We design, engineer and fabricate custom glass stairs to meet the most demanding project requirements. Our dedication to details extends from our fabrication to installation, offering a contemporary look and amazing strength and structural integrity.

RAILINGS

Our custom glass railings are one-of-a-kind creations, and can be designed for both interior or exterior applications. Glass railings bring modern design to any space.

WALLS

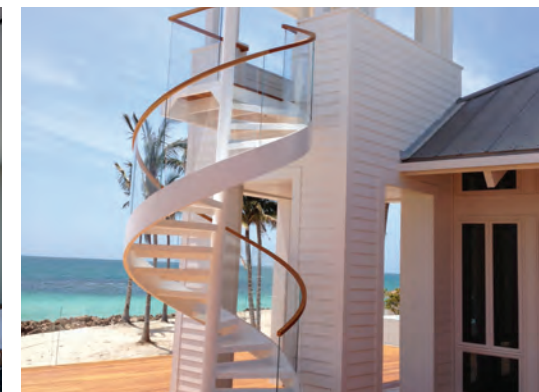

Glass walls can be designed and engineered for interior or exterior applications with heights capable of reaching over 20'. Our wall systems offer a contemporary elegance to any space.

FLOORS

Glass floors offer a unique combination of form and function. Our engineered glass can provide a breath-taking design element in any environment while meeting all safety and structural performance requirements.

DOORS

We offer glass doors that are custom engineered to meet the most demanding performance and aesthetic designs. Glass doors, on their own or integrated into a glass wall system, are a stunning way to bring elegance to any entrance.

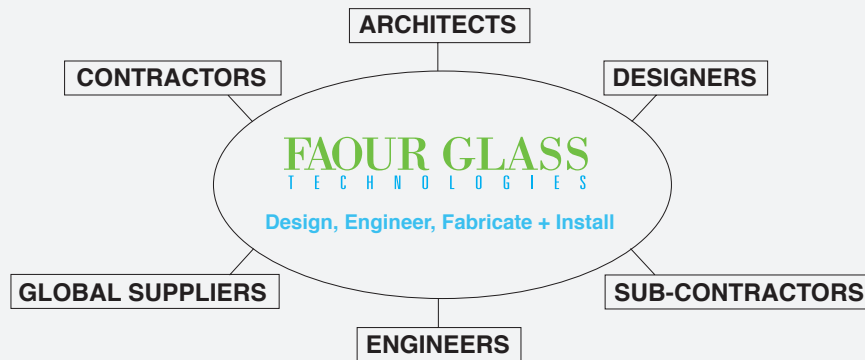

Creating serenity, elegance, and distinction with glass, through innovative engineering...

Faour Glass Technologies designs, engineers, fabricates and installs all of its products, offering total coordination from product concept to project completion. This turnkey approach provides the highest quality products with the assurance of complete customer satisfaction. Since 1975, the company has brought innovative, stunning, high-performance glass creations to the residential and commercial markets – providing some of the most unique glass solutions in the world.

OUR APPROACH

Faour Glass establishes unique partnerships worldwide, to satisfy each and every project, from design through installation. This strategic integrated approach allows for the best possible project solution, providing one-of-a-kind glass creations and on-time completions.
